

Set 3 — Right Law Test Set

Legal Aid AI · External evaluation set for retrieval (does the app find the right law?) · Collected 29 September 2026

Questions	24 real situations, each taken from a published Indian court, consumer commission or Information Commission decision
Domains	Consumer: 6 · Cyber: 6 · Tenancy (Delhi): 6 · Constitutional / public authority (RTI): 6
Expected output	The law the decision actually applied: the Act, rules or case, and the section numbers. All of it is in the app's dataset.
Used for	Retrieval metrics: Document Hit@1 / Hit@5 (right document found), Section Hit@5 (right section found) and MRR (how high it ranks). No Gemini calls, so no API quota is used.
File	4parameters_test/externaltestset/set3/right_law.json (details in README.md in the same folder)

Why this set exists

An answer can only be correct if the app first finds the right law. This set checks that step on its own. The questions are real situations that came before Indian courts and commissions, and the expected law is what the judge or commissioner actually applied — not what the team thinks should apply.

It is one of three external sets. **Set 1** tests whether answers are *correct* against official answers (ROUGE, BERTScore). **Set 2** tests messy real questions and whether answers are *grounded* (AlignScore, ParaScore). **Set 3** (this one) tests whether the app finds the *right law*.

How it was built

- **Searched Indian Kanoon** for recent decisions in each area and read each one.
- **Rewrote the facts as a user would type them**, in plain first-person words, without naming any Act or section, so the app has to work out the law itself.
- **Recorded the law the decision applied**, and matched it to the exact document titles and file names in the app's dataset. Closely related documents that are also correct (for example a Supreme Court case on the same section) are accepted too.
- **Mapped old IPC sections to BNS** in the cyber cases, since the dataset has the Bharatiya Nyaya Sanhita.
- **Did not use any decision that is itself in the dataset**, so the app cannot find the answer by matching the case.

Total	24		

Three cyber questions are about bank fraud; for those the Consumer domain is also accepted, because the complaint route (RBI Ombudsman, consumer commission) sits there.

Table B — Every question with its expected law and source

The question is written from the facts of the decision. The expected output is the law the decision applied; the app passes if it retrieves these documents, and scores higher if it also reaches these sections. Click a source to open the decision.

Limitations

- **24 questions is a small set.** It shows where retrieval is strong or weak, not a precise percentage.
- **Document Hit@5 is lenient** because related documents are accepted. **Section Hit@5 is the stricter number** and the better one to quote.
- **Section numbers are matched without sub-sections** (“14”, not “14(1)(e)”), because that is how the dataset is indexed.
- **The decision's outcome is not tested** — only which law applied. Some decisions went against the person asking; the law is still the right law for the question.
- **The expected law is a team reading of each decision;** the decision text is linked so it can be checked.
